## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by any one of Kemper (US 6413366) or Britz (USPGP 2004/0256295) or Dolbear (US 1478703) or Dolbear (US 1480884) or DE 10250762) or Tlok (US 5910248). Any of the above patents disclose a device defining a container having a foam layer forming means and means in the upper portion of the container to guide in a fluid. The valve means are inherent or are specifically disclosed. In Kemper '366 there is the fig. 1 embodiment with feed suspension at 5 into the foam layer. In Britz '295 there is the fig. 4 embodiment with feed means 7 into foam layer 12. The Dolbear patents are similar with feed being through rotary drums into the foam layer. DE '762 discloses six different embodiments with the feed being sent into the

froth layer. In Tlok '248 there is a foam layer 8 into which water and particles from influent water feed inlet 2 ultimately engages.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tlok (US 5910248). It is axiomatic that dishwasher liquid needs to be filtered as taught by any number of well known patents. Tlok '248 discloses a method of filtration in which very small organic material and/or larger organic material (fly sized) can be removed from water by employing a trickle filter feeding to a foam layer. Residual food particles fit neatly in the range of materials indicated by Tlok '248 as removable via his method and to filter such a waste water recycle stream would have been obvious to one of ordinary skill in the art.
